Creating a Dynamic Website from Scratch using Next.js :-

• Developed a dynamic and responsive website from scratch using Next.js • Integrated with various data sources and APIs to fetch and display real-time content, enhancing the website's functionality • Applied performance optimization techniques such as code splitting and lazy loading to improve application loading times • Implemented Redux Toolkit and thunk middleware for state management and asynchronous API calls.

Technologies Used: Next.js , React.js , JavaScript , HTML5 , Tailwind , Redux toolkit , SASS , Thunk , Axios , Github

Projects

Oracle Robotics AI

SECURE AI PRODUCT WEB APP

Next.js , JavaScript , Redux-toolkit , Tailwind CSS , Next-Auth , Axios

- Built and optimized a secure AI product platform using Next.js, Redux Toolkit, and Tailwind CSS, with NextAuth.js to implement authentication and role-based page access for valid users.
- Developed responsive UI components and managed global state to enhance user experience for a company offering AI hardware and medical industry solutions.
- Contributed to a scalable, production-ready web application for showcasing and selling AI robotic parts, aligning with industry standards and business requirements.
- Collaborated with cross-functional teams to integrate business logic, ensuring seamless deployment and maintainability of features related to AI product listings, user roles, and real-time updates.

Youtube Clone

SEAMLESS INTEGRATION WITH YOUTUBE API

React.js , JavaScript , Redux-toolkit , Tailwind , Thunk , React-router

- Real-time Communication: Integrate live chat functionality to allow users to interact in real-time during live video streaming, fostering a dynamic and engaging user experience
- Debouncing and Caching: Implementing debouncing ensures a smoother user experience by reducing unnecessary API calls, while caching optimizes performance by storing and retrieving frequently requested data, ultimately enhancing the responsiveness of the comment section
- N-level Nesting Comments: Enable users to engage in meaningful discussions by supporting nested comments to multiple levels, fostering a sense of community and facilitating organized conversations.

Weather App

WEATHER FORECAST APP

React.js , JavaScript , SASS

[Github](#)

- Developed a responsive weather application using React to provide current conditions, daily, and hourly forecasts for a given city.
- Designed an intuitive and visually appealing user interface, incorporating features such as city autocomplete and clear visual representations of weather data for improved user experience.
- Integrated a weather API (OpenWeatherAPI) to dynamically fetch and display real-time weather data.
